CHRONOBIOLOGY INTERNATIONAL, 15(6), 675–679 (1998)

Subject Index to Volume 15

A

Adrenergic agonists, β_1 and β_2, biological-time-dependent differences of effect on rat aorta and influence of endothelium on, 159–172
Aggressive social stimuli, and lack of a phase shift of the circadian temperature rhythm in rats, 231–240
Ampicillin, chronokinetics in active biliary secretion in rats, 309–321
Angiotensin-converting enzyme inhibitor captopril effect on the time-dependent variation of kaolin-induced writhing reaction, 173–179
Aorta, rat
  biological-time-dependent differences in effect of β_1- and β_2-adrenergic agonists on and influence of endothelium on, 159–172
  temporal variation in effect of potassium chloride and phenylephrine on, 39–48
Asthma, serum cortisol as a marker of nocturnal worsening of symptoms and lung function in, 85–92

B

Biliary secretion chronokinetics, of ampicillin in rats, 309–321
Blood pressure
  circadian profile in normotensive patients with mild hyperthyroidism, 337–347
  effects of SCN lesions on circadian rhythm of, 135–145
Body temperature circadian rhythm, lack of phase shift due to aggressive and sexual social stimuli, 231–240
Brain death, long-term heart rate fluctuations in patients with, 633–646
Bright light therapy, for rest-activity rhythm disorders in patients with vascular dementia and dementia of Alzheimer's type, 647–654
Buthionine sulfoximine, for pharmacological modulation of cisplatin toxicity rhythms, 323–335

C

Captopril, effect on the time-dependent variation of kaolin-induced writhing reaction, 173–179
Chronobiology principles and applications (book review), 101–103
Chronokinetics, of active biliary ampicillin secretion in rats, 309–321
Chronotherapeutics, Gallup survey of knowledge and attitudes of American physicians and public about, 377–394
Circadian pacemaker period in humans, lack of impact of physical activity on, 49–57
Circadian rhythm
  of activity in Japanese quail in constant darkness, 219–230
  biochemical, modulation by lithium, 29–38
  cellular requirements of SCN transplants for restoration of, 551–566
  effects of L-NAME on morphine-induced analgesia dependent on, 283–289
  endogenous, absence of seasonal variation of the phase of, 623–632
  in the filter-feeding behavior of caddis fly larvae, 595–606
  Gallup survey of the knowledge and attitudes of American physicians and public about, 377–394
  melatonin's role in, 457–473
  photic entrainment in rodents, 395–423
  reactions to nasal continuous positive airway pressure treatment, 265–273
Circadian system
  conditioning in, 447–456

of mammals, nonphotic entrainment of, 425–445
organization in insects, 567–594
Circadian timing lack, in intertidal invertebrates, significance in the circatidal/circalunidian debate, 205–218
Circatidal/circalunidian oscillators, significance of the lack of circadian timing in intertidal invertebrates in, 205–218
Circumnutation movements, of shoots of soybeans *Glycine soja* (Sieb. and Zucc.) and *Glycine max* (L.) Merr., 1–11
Cisplatin toxicity rhythms, pharmacological modulation with buthionine sulfoximine, 323–335
Clarity, variability in circadian rhythm of activity in Japanese quail in constant darkness, 219–230
Contraceptives, comparison of salivary melatonin rhythms among users and nonusers in the subarctic (erratum), 100
Cortisol, serum, as a marker of nocturnal worsening of symptoms and lung function in asthma, 85–92
Crassulacean acid metabolism, circadian regulation of phosphoenolpyruvate carboxylase in, 109–118

D

Daily rhythms, in male mice meiosis, 13–20
Delayed sleep phase syndrome, role of melatonin in the long-term treatment of, 181–190
Demand-feeding activity, annual rhythms in sea bass, 607–622
Dementia, vascular and Alzheimer's type, morning bright light therapy for rest-activity rhythm disorders in patients with, 647–654
Desmodium gyrans, ultradian rhythms in, 293–307
Diel feeding pattern, seasonal phase inversion in the sea bass, 607–622
Diurnal variations, of human illumination under natural conditions, 59–70
Drosophila melanogaster, oviposition in the *period* genotypes of, 119–133

E

Endogenous pacemaker, versus synchronizing mechanisms, 489–511
Endothelium, influence on the biological-time-dependent differences in effect of β_1- and β_2-adrenergic agonists on rat aorta, 159–172
Entrainment
through conditioning, 447–456
nonphotic, of the circadian system of mammals, 425–445
photic, of circadian rhythms in rodents, 395–423

G

Gallup survey of attitudes and knowledge of American adults and physicians, findings for medical chronobiology and chronotherapeutics, 377–394
Glucose circadian rhythm, modulation by lithium, 29–38
Glycine soja (Sieb. and Zucc.) and *Glycine max* (L.) Merr. soybeans, ultradian movements of shoots of, 1–11
Gonyaulax luciferase, circadian regulated, constant mRNA level over the cycle, 93–98

H

Hamsters, improvement of running wheel for, 147–158
Heart rate
circadian profiles, in normotensive patients with mild hyperthyroidism, 337–347
fluctuations in postoperative and brain-dead patients, 633–646
Humans
absence of seasonal variation in the phase of the endogenous circadian rhythm in, 623–632
illumination, seasonal and diurnal patterns under natural conditions, 59–70
lack of impact of physical activity on circadian pacemaker period in, 49–57
Hyperthyroidism, mild, circadian blood pressure and heart rate profiles in normotensive patients with, 337–347

I

Inferential statistical method, for analysis of nonsinusoidal hybrid time series with unequidistant observations, 191–204

Insects
aquatic, filter-feeding behavior of caddis fly larvae reveals masking and circadian rhythmicity, 595–606
organization of the circadian system in, 567–594

J

Japanese quail, circadian rhythm in constant darkness, 219–230
Jet lag
optimal melatonin dosage for the alleviation of (errata), 99
prevention by retaining home-base sleep hours, 365–376

K

Kaolin-induced writhing reaction, effect of captopril on the time-dependent variation of, 173–179

L

Lactic acid circadian rhythm, modulation by lithium, 29–38
Leaf movements, in *Desmodium*, 293–307
Light
phase response curve, out of phase to phase response curve to melatonin in humans, 71–83
seasonal and diurnal patterns in humans under natural conditions, 59–70
Light pulses, brief, for phase resetting of a mammalian circadian rhythm (erratum), 667–668
Lithium, modulation of biochemical circadian rhythms in Wistar rats by, 29–38
L-NAME. *See* L-N^G-Nitroarginine methyl ester
Locomotor activity, in the *period* genotypes of *Drosophila melanogaster*, 119–133
Luciferase, of *Gonyaulax*, constant mRNA level over the cycle, 93–98
Lung function, in asthma, serum cortisol as a marker of, 85–92
Luteinizing hormone serum levels, 24-hour rhythm development in rats neonatally administered melatonin, 21–28

M

Male mice reproduction, daily rhythms in, 13–20
Malondialdehyde circadian rhythm, modulation by lithium, 29–38
Masking, in the filter-feeding behavior of caddis fly larvae, 595–606
Medical chronobiology, Gallup survey of knowledge and attitudes of American physicians and public about, 377–394
Meiosis, daily rhythms in male mice, 13–20
Melatonin
optimal dosage for the alleviation of jet lag, 655–666
(errata), 99
phase response curve in humans, as out of phase to phase response curve to light, 71–83
role in the long-term treatment of delayed sleep phase syndrome, 181–190
role in vertebrate circadian rhythms, 457–473
salivary rhythms, comparison among oral contraceptive users and nonusers in the subarctic (erratum), 100
24-hour rhythm development in serum prolactin and luteinizing hormone levels after neonatal administration in rats, 21–28
Mood, effect of sleep loss on, 349–363
Morphine, circadian-rhythm-dependent effects of L-NAME on analgesia induced by, 283–289
Motor activity, lack of impact on the period of the circadian pacemaker in humans, 49–57
Multiple components analysis, for analysis of nonsinusoidal hybrid time series with unequidistant observations, 191–204

N

Nasal continuous positive airway pressure treatment, circadian reactions to, 265–273
Neural transplantation, of SCN for restoration of circadian behavior, 513–533
News and comments, 105–107, 291–292, 669–670
L-N^G-Nitroarginine methyl ester (L-NAME),

circadian-rhythm-dependent effects on morphine-induced analgesia, 283–289
Nonphotic entrainment, of the circadian system of mammals, 425–445
Nonsinusoidal hybrid time series, with unequidistant observations, analysis by inferential statistical method, 191–204

O

Oviposition, in the *period* genotypes of *Drosophila melanogaster*, 119–133

P

Pavlovian conditioning, for entrainment in the circadian system, 447–456
Peptic ulcer, rhythmic patterns in incidence of, 241–264
Period genotypes, of *Drosophila melanogaster*, oviposition in, 119–133
Phase resetting, rapid, of a mammalian circadian rhythm by brief light pulses (erratum), 667–668
Phase response curve to melatonin, human, as out of phase with the phase response curve to light, 71–83
Phenylephrine, temporal variation in effect on rat aorta, 39–48
Photic entrainment, of circadian rhythms in rodents, 395–423
Physical activity
  effect of sleep loss on temperature, mood, and physical performance of subjects who habitually engage in, 349–363
  lack of impact on the period of the circadian pacemaker in humans, 49–57
Physical performance, effect of sleep loss on, 349–363
Pigs, stress susceptible, fall and winter hormone concentrations related to stress in, 275–281
Plant protein kinase, circadian regulation of, 109–118
Postoperative patients, long-term heart rate fluctuations in, 633–646
Potassium chloride, temporal variation in effect on rat aorta, 39–48
Preference, of hamsters for a running wheel, 147–158
Prolactin serum levels, 24-hour rhythm development in rats neonatally administered melatonin, 21–28
Protein kinase, plant, circadian regulation of, 109–118

R

Rest-activity disorders, in patients with vascular dementia and dementia of Alzheimer's type, morning bright light therapy for, 647–654
Rhythms
  annual, in demand-feeding activity in sea bass, 607–622
  biochemical circadian, modulation in Wistar rats by lithium, 29–38
  circadian
    of activity in Japanese quail in constant darkness, 219–230
    of blood pressure, effects of SCN lesions on, 135–145
    of blood pressure and heart rate in normotensive patients with mild hyperthyroidism, 337–347
    cellular requirements of SCN transplants for the restoration of, 551–566
    effects of L-NAME on morphine-induced analgesia dependent on, 283–289
    endogenous, absence of seasonal variation of the phase of, 623–632
    in the filter-feeding behavior of caddis fly larvae, 595–606
    Gallup survey of the knowledge and attitudes of American physicians and public about, 377–394
    mammalian, rapid phase resetting by brief light pulses (erratum), 667–668
    melatonin's role in, 457–473
    photic entrainment in rodents, 395–423
    reactions to nasal continuous positive airway pressure treatment, 265–273
    restoration by anterior hypothalamic grafts containing the SCN, 513–533
  circadian temperature, lack of phase shift due to aggressive and sexual social stimuli, 231–240
  daily, in male mice meiosis, 13–20
  in vitro susceptibility, biological-time-dependent differences in effect of β_1- and β_2-adrenergic agonists of rat aorta and influence of endothelium, 159–172
  in incidence of peptic ulcer perforation, 241–264

of salivary melatonin among oral contraceptive users and nonusers in the subarctic (erratum), 100
24 hour, in serum prolactin and luteinizing hormone levels in rats neonatally administered melatonin, 21–28
ultradian
in *Desmodium*, 293–307
in the effect of potassium chloride and phenylephrine on rat aorta, 39–48
of shoots of soybeans *Glycine soja* (Sieb. and Zucc.) and *Glycine max* (L.) Merr., 1–11
Running wheel, improvement of, 147–158

S

SCN. *See* Suprachiasmatic nucleus
Sea bass, annual rhythms in demand-feeding activity of, 607–622
Season, and relation to stress-related hormone concentrations in stress-susceptible pigs, 275–281
Seasonal phase inversion, of the Diel feeding pattern in sea bass, 607–622
Seasonal variations
absence in the phase of the endogenous circadian rhythm in humans, 623–632
of human illumination under natural conditions, 59–70
Selection, possibility in the circadian rhythm of activity in Japanese quail in constant darkness, 219–230
Sexual social stimuli, and lack of a phase shift of the circadian temperature rhythm in rats, 231–240
Sleep disorders
apnea, circadian reactions to nasal continuous positive airway pressure treatment for, 265–273
delayed sleep phase syndrome, role of melatonin in the long-term treatment of, 181–190
Sleep hours, home base, retention for prevention of sleep loss, 365–376
Sleep loss, effect on temperature, mood, and physical performance in subjects with different amounts of habitual physical activity, 349–363
Social stimuli, aggressive and sexual, and lack of a phase shift of the circadian temperature rhythm in rats, 231–240
Soybeans *Glycine soja* (Sieb. and Zucc.) and *Glycine max* (L.) Merr., ultradian movements of shoots of, 1–11
Stress-susceptible pigs, fall and winter hormone concentrations related to stress in, 275–281
Suprachiasmatic nucleus (SCN)
lesions, effects on circadian blood pressure rhythm in normotensive and transgenic hypertensive rats, 135–145
organization of, 475–487
output signals of, 535–550
photic entrainment of circadian rhythms as a result of phase shifts in, 395–423
as a population of coupled oscillators, 489–511
restoration of circadian behavior by anterior hypothalamic grafts containing, 513–533
transplants, cellular requirements for restoration of circadian rhythm, 551–566
Swine. *See* Pigs

T

Temperature, effect of sleep loss on, 349–363
Time-dependent variations
in the effect of β_1- and β_2-adrenergic agonists of rat aorta and influence of endothelium on, 159–172
of kaolin-induced writhing reaction, effect of captopril on, 173–179
Toxicity rhythms, of cisplatin, pharmacological modulation with buthionine sulfoximine, 323–335

U

Ultradian rhythms
in *Desmodium*, 293–307
in the effect of potassium chloride and phenylephrine on rat aorta, 39–48
of shoots of soybeans *Glycine soja* (Sieb. and Zucc.) and *Glycine max* (L.) Merr., 1–11

V

Vasoactive agents, temporal variation in effect on rat aorta, 39–48
Vertebrate circadian rhythms, melatonin's role in, 457–473
